

It has been brought to my attention that the FCC is considering giving Low Power FM priority over current FM translator service. I am aware that this decision could affect my ability to listen to K-Love which is broadcasted nationally in many communities over these FM translators. I am opposed to any changes that would affect K-Love's ability to offer their positive and encouraging programming. There is not another station that offers this programming whose signal reaches into Floyd Co. VA (24091) where my family and I spend a lot of our time. It is in the public interest to allow K-Love to continue to broadcast in our area and in many other communities around the nation, by offering this programming that changes people's lives and provides radio for the whole family.
